VITAMIN & MINERAL TESTING

SHELF LIFE & STABILITY STUDIES

PROBIOTIC ID & ENUMERATION

COMPENDIAL MONOGRAPH TESTING

METHOD VALIDATION & VERIFICATION

**NUTRITIONAL ANALYSIS &
LABEL CLAIM VERIFICATION**

ANALYTICAL CHEMISTRY

OUR SOLUTIONS

The dietary supplement industry is incredibly diverse, fast-moving, and constantly pivoting as new consumer trends and supply chain issues emerge. With the added complexity of functional and active compounds, it is essential to partner with a testing laboratory to help you navigate challenges and regulatory requirements. Our ISO 17025 accredited laboratories network offers the most comprehensive portfolio of analytical solutions available, including GMP-compliant solutions, to meet your individual needs.

Ingredient Verification & Finished Product Testing

Verifying your ingredients and finished product formulations is key to producing a safe and high-quality product. We offer both Compendial (i.e., USP, EP, AOAC, etc.) and non-Compendial testing methods to verify safety, quality, authenticity, potency, purity, and identification actively.

Scientifically Valid Method Development

For a method to be considered scientifically valid, it must be precise, accurate and, specific for its intended use. Our experts ensure that each method we select for your products meets the criteria for being scientifically valid and the results are defensible against Health Canada and FDA audits. We have dedicated teams to support method development of new ingredients and products and method validation and verification.

Retail Compliance Testing

We are the leading service provider for major online retail compliance testing programs. We select fit-for-purpose methods and provide you peace of mind in selling your products in retail channels requiring specific certificates of analysis from an ISO 17025, GMP accredited laboratory.

Consulting, Auditing, & Certification Support

Eurofins Experchem provides auditing and consulting for critical steps in the supply chain, including warehouse or distribution center audits, supplier audits, GMP audits, HACCP verification audits, pre-assessments, GFSI audit schemes, risk assessments, and many others.

WHO

WE SUPPORT

We understand that each supplement form presents unique challenges-
-what works for a pressed tablet may not work for a gel cap. We are proud to offer a tailored approach and solutions to support testing across each unique product and matrix. Additionally, we provide a full suite of GMP-compliant testing solutions to meet the standards set for OTC products.
